

# LARGE CAP VALUE FUND

UPDATED: DECEMBER 31<sup>ST</sup>, 2018

## Investment Strategy

The Fund seeks long-term capital appreciation and invests primarily in large cap dividend stocks that we believe are undervalued and have the potential for capital appreciation..

The Fund will sell covered call options against a portion of the stocks in the Fund's portfolio. The selling of covered call options may tend to reduce the volatility of the Fund because the premiums received from selling the options will reduce any losses on the underlying securities, but only by the amount of the premiums.

Investment selection is based on fundamental analysis, using a combination of value metrics to screen for stocks., These metrics may include price to earnings ratio, price to cash flow ratio, price to book value, price to sales ratio, dividend amount, dividend yield, debt to equity ratio, revenue growth, earnings growth, return on equity, and return on assets. Regular review of holdings is done to determine stocks to buy, hold and sell in the portfolio.

The S&P 500 is a market-value weighted index; each stock's weight in the index is proportionate to its market value. The 500 stocks are chosen from market size, liquidity and industry grouping, among other factors. The S&P 500 is designed to be a leading indicator of U.S. equities and is commonly used as a proxy for the overall market. It is meant to reflect the risk/return characteristics of the large-cap universe. The index returns do not reflect the deduction of expenses, which have been deducted from the portfolios' returns. The index return assumes reinvestment of all distributions and does not reflect the deduction of taxes and fees. Individuals cannot invest directly in the index, however, an individual can invest in exchange traded funds or other investment vehicles that attempt to track the performance of a benchmark index.

Mutual Fund investing involves risk. Principal loss is possible. Past performance is no guarantee of future results. The Neiman Large Cap Value Fund invests in common stocks which may experience periods of turbulence and instability, and the general risk that domestic and global economies may go through periods of decline and cyclical change. The Fund regularly sells covered call options which will limit the Fund's gain, if any, on the underlying securities, and the Fund continues to bear the risk of a decline in the value of the underlying stock until the option expires or is closed out. There are additional risks associated with investing in the Neiman Large Cap Value Fund including but not limited to value investing, exchange traded funds, management risk and non-diversification.

The adviser's strategy may fail to produce the intended results.
